

What is EzExtend?

EzExtend is a built-in tool for managing assignment extension requests within your Learning Management System (LMS). It simplifies the process for students while reducing administrative workload for faculty and staff.

How does EzExtend benefit students?

Students can submit extension requests directly from the assignments page in the LMS. The user-friendly design makes it easy to request extensions and stay updated on approval status. Plus, the streamlined process helps boost pass rates and lower non-submission rates.

How does EzExtend reduce workload for faculty?

EzExtend automates key tasks in the extension process—sending notifications, updating due dates, and adding system notes—so faculty don't have to handle these manually. This allows educators to focus more on teaching and less on admin work.

How much time can EzExtend save?

EzExtend processes an average extension request in less than two minutes, saving over 10 minutes compared to traditional methods. It automates repetitive tasks like updating due dates, notifying students, and tracking requests, cutting down significantly on admin time.

For short-term extensions, you can fully automate the process while setting caps per student, eliminating manual work for these requests altogether

Has EzExtend been tested?

Yes, EzExtend has processed over 200,000 extension requests across multiple institutions. Data shows students using EzExtend have higher submission and pass rates. Faculty report a notable reduction in their administrative workload.

Can EzExtend integrate with my LMS?

Absolutely. EzExtend works seamlessly with various LMS platforms, including Canvas, without requiring students or staff to leave the system.

Does EzExtend update assignment deadlines automatically?

Does EzExtend update assignment deadlines automatically?

Yes, once an extension is approved, EzExtend automatically updates the due date in the LMS, cutting out manual updates and reducing the risk of errors.

Can I customize extension rules with EzExtend?

Yes, administrators can customize extension rules, permission levels, and messaging. You can set specific requirements, like reasons for the extension or supporting documentation.

Does EzExtend work at all levels within the LMS?

Yes, EzExtend can be implemented at the account or sub-account level. It also offers four different user roles with varying permission levels to suit your institution's needs.

Does EzExtend store sensitive documents, like medical certificates?

No, student-uploaded documents are stored by the university. EzExtend does not have access to these files. The tool only stores "usage data," such as extension outcomes and request reasons, but not sensitive personal information.

What does EzExtend cost?

Costs depend on the number of student users and the length of your contract. Contact us for a custom quote.

Does EzExtend lead to misuse of extension policies?

After handling over 200,000 requests, our data shows no evidence of misuse. Students are strategic about which assignments they request extensions for, focusing on what matters most to them. Higher usage often correlates with "at-risk" students, who already face academic challenges. Instead of misuse, we've found that offering an easy-to-use tool empowers students to make better decisions about when they truly need an extension.

EzExtend also offers controls like setting limits on automatic approvals and requiring human approval for long-term extensions, ensuring fair use.

What data or reports can EzExtend provide?

We're developing reporting dashboards with account, program, teacher, and student-level data, due for release in early 2025. Currently, we offer CSV file exports and plan to release an API to sync EzExtend data with your CRM or local databases.

A **better solution** for
assignment extension
requests.
